DETAILED ACTION

Claim Objections

1. Claim 5 is objected to because of the following informalities: 16 is used to define a cylinder and a side wall. Appropriate correction is required.

2. Claims 7/5 and 8/5 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on another multiple dependent claim. See MPEP § 608.01(n).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-9, 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hasegawa et al.

Hasegawa et al. shows a fuel injector comprising a chamber 34 with a fuel inlet and a plurality of fuel outlets 35, and comprising a fuel distributor 7 that is arranged in the chamber 34 for the purpose of distributing fuel introduced into the chamber 34 via the fuel inlet to the outlets, characterized in that the fuel distributor 7 comprises a generally rotary symmetric distributor, wherein the chamber 34 is delimited by at least one side wall 341 and that the fuel distributor 7 defines a lid or plug that forms an end wall in relation thereto as recited in claim 2.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/605,587 Page 3

Art Unit: 3752

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hasegawa et al. in view of Baxter et al.

Baxter et al. teaches a method of assembling a fuel injector in which various parts are welded together to form strong connections between the parts. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Hasegawa et al. by attaching the fuel distributor to an adjacent side wall by means of welding as taught by Baxter et al. to form a strong bond.

7. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hasegawa et al.

It has been held that a recitation with the respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations.

Allowable Subject Matter

8. Claims 13 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Application/Control Number: 10/605,587 Page 4
